

KVision DVR
Video surveillance solution for any business

softrust ↗

DVR system

KVision DVR is a modern surveillance technology for digital video and audio recordings, capable of data storing and processing, as well as of creating long-term available databases.

It can also be connected with IP networks, creating a comprehensive solution capable of meeting the most stringent security requirements.

Benefits

- › Increased level of trust in system operators due to the automatic monitoring of cameras and the integrity functions of the database recordings.
- › Instant searching - the recorded images are found and played locally or on any local network client
- › Integrate any type of camera, as it is an equipment that records data from analogical cameras

Applications

BUSINESS

- › Retail - small shops
- › Casinos
- › Schools, kindergartens and after-schools
- › Banks
- › Hotels - reception
- › Small factories with production halls
- › Offices

RESIDENTIAL

- › Villas
- › Holiday homes
- › Pensions

Functions

- › Instant replay of playback and live events through alarm module
- › Recorded data instant playing, regardless of database size
- › Video quality auto adjust, according to set parameters
- › Data management algorithm for checking and automatically correction of any nonconformity
- › Individual settings for cameras according to light conditions by day and night
