

SeVA SMART Connector

Systems such as Access Control, Fire Detection, Burglary Detection, CCTV are relatively long-lived systems compared to the current rhythm of change in technology, hardware generations and software applications. During this long period of operation, in some cases replacements of some of the systems are necessary and maintaining compatibility with the overall solution becomes a challenge.

In order to make the new CCTV systems compatible with the solution implemented at the customer's site, an application or integration module is required.

SeVA SMART Connector provides the integration functions needed for a modern security system!

- Integrating MasterVision analog CCTV systems with the sMs system for seamless and integrated use
- Integration of 3rd party analog CCTV systems, other than MasterVision, with the sMs system, for a unified and integrated use
- Integration of new ONVIF compliant IP CCTV systems with the sMs system for seamless and integrated use
- Viewer module allowing centralized viewing of images from both existing MasterVision and new IP video systems
- Integration with sMs centralized management application: native integration for metadata associated with events, alarm camera, possibility to generate actions, user commands
- Includes data traffic prioritisation module
- Provides Ipv4 compatibility and support for IPv6 functionality - for investment security in case IPv4 to IPv6 migration is required.

Codes :

SeVA SMART Conector Mini : 4/8 channels

SeVA SMART Conector Standard : 16 channels

SeVA SMART Conector Pro: 32 channels

SeVA SMART Conector Enterprise : 64 channels

SeVA SMART Conector Custom Eddition : ≥128 channels
